EDUCATION

Harvard University

Cambridge, MA

Bachelor of Arts in Applied Math, GPA: 3.96/4.0

Sep. 2021 – May 2025

- Relevant Coursework: Advanced Topics in Data Science, Artificial Intelligence, Applied Linear Algebra and Big Data, Probability, Statistical Inference, Data Structures and Algorithms
- Harvard Detur Book Prize winner (academic performance in top 10% of class)
- 2x John Harvard Scholar winner (academic performance in top 5% of class)

Hopkins School

New Haven, CT

High School Diploma, ACT: 36, SAT: 1560

Sep. 2015 – May 2020

- National Merit Scholarship winner

EXPERIENCE

Teaching Assistant

June 2024 – Aug. 2024

Jane Street

New York, NY

- Wrote algorithms to trade stocks and ETFs in simulated markets, placing in top 20% of cohort. (Python)
- Taught top-level data structures and algorithms class, designing coding assignments and giving daily feedback.
- Students successfully implemented information entropy solvers for Wordle and AI agents for Camel Up. (Python)
- Facilitated weekly discussions on data science and market making for 100 students.

Software Engineer

June 2023 – Aug. 2023

Project Music

Stamford, CT

- Managed donation campaign, helping donation office optimize outreach and improving potential yield of donations by 55% by creating a regression model from historic donation data. (pandas, Scikit-Learn)
- Streamlined donation data interface, presenting essential donor information in 2 clicks where it took dozens of steps before.
- Redesigned website over two months; worked with clients and board members to determine essential features, including multilingual support and a more accessible donation page. (HTML/CSS/JS)

Undergraduate Fellow

Sep. 2021 – May 2022

Harvard Bok Learning Lab

Cambridge, MA

- Wrote and implemented 5 interactive online tutorials for Harvard math and engineering classes. (HTML/CSS/JS)
- Assisted in developing [videos and colab notebook](#) to demonstrate acoustical phenomena for “Engineering the Acoustical World” course, reaching hundreds of students and increasing course reviews by 12% the following year. (Python)

Programmer

June 2020 – Sep. 2020

Riskthinking.AI

Westport, CT

- Engineered data visualization software for AI company predicting climate risk scenarios based on geodata including temperature, sea level rise, and precipitation. (React.js)
- Software was used by businesses around the world to analyze their susceptibility to climate change.

PROJECTS

NBA MVP Classifier | *pandas, Matplotlib, Scikit-Learn, BeautifulSoup*

Sep. 2024 – Dec. 2024

- Used two models to predict NBA players most likely to win MVP: LASSO logistic regression and random forest
- Scraped 70 years of player statistics from [basketball-reference.com](https://www.basketball-reference.com)
- Used SMOTE over-sampling to address class imbalance; used cross-validation for hyperparameter tuning and ROC curve for final model selection
- Resulted in a final CV accuracy of 0.99 and ROC-AUC score of 0.9999

Financial Forecasting | *Matlab*

Apr. 2024 – May 2024

- Built feed-forward neural network from scratch and trained on dataset of stock returns using back-propagation
- Conducted time series analysis (MCA, multivariate PCA) on stock returns to forecast trends

10th place, Bloomberg BPuzzled 2024 Global Competition

Apr. 2024

- Placed 10th in global intercollegiate puzzle competition involving programming, math, creative problem-solving

TECHNICAL SKILLS

Programming Languages: Python, R, MATLAB, SQL, HTML, CSS, JavaScript, Github, VSCode

Libraries: pandas, NumPy, Matplotlib, Seaborn, Scikit-Learn, BeautifulSoup

Languages: Chinese (Fluent), Spanish (Intermediate)
